2121

SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	02/21/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary	Application No. 10/669,047	Applicant(s) DUBOIS ET AL.	
	Examiner Thomas H. Stevens	Art Unit 2121	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 November 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 13-26 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 13-26 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 13-26 were examined.

Section I: Non-Final Rejection

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 2121

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 13-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gallagher et al., titled, "An Efficient 3-D Visualization Technique for Finite Element Models and Other Coarse Volumes" (hereafter, Gallagher) in view of Ogen et al., titled, "A Pseudo-Elastic Model for the Mullins Effect in Filled Rubber" (hereafter Ogen).

Per claims 13, 20-24,26 Gallagher teaches

- finite element analysis (introduction, right column, 2nd paragraph)
- rubber-like material (pg. 191, right column, 6th paragraph, line 3)
- lookup table (pg. 187, left column, line 3)

But Gallagher fails to teach a plurality of stress functions, stain-stress curves, solving eigensolutions of a deformation gradient tensor, and transforming the principal stresses into global coordinate system all contained in a software package to which Ogden teaches

Per claims 13, 18, 20-24,26 Ogden teaches

- defining a plurality of elements and a strain-stress curve (pg. 2872, figure 2)

Art Unit: 2121

- iteratively calculating a plurality of stress function values at a plurality of corresponding stretch ratios (as defined in pg. 10, paragraph 0049, lines 4 and 5: pg. 2876, equation 5.20)
- associated stress values defined in the strain-stress curve (pg. 2872, figure 2)
- storing the plurality of stress function values into a stress function (pg. 2861, Introduction, software that's loaded on a computer e.g., ABAQUS and MARC)
- obtaining a set of principal stretches by solving eigensolution of a deformation gradient tensor (pg. 2863, "Basic Equations and Notation" section, lines 5-6) at each integration point of each of the elements
- determining principal stresses (pg. 2864, last paragraph "Isotropy" section, lines 2-3) in principal directions from the stress function in accordance with the principal stretches
- transforming the principal stresses (pg. 2864, last paragraph "Isotropy" section, lines 2-3) into global coordinate system (pg. 2866, figure1, points on the curve)
- computer program product with code (pg. 2861, Introduction, software that's loaded on a computer e.g., ABAQUS and MARC)

Therefore it would have been obvious to a person having ordinary skill in the art at the time of applicants' invention to modify Gallagher in view of Ogden because Ogden for the purpose of creating a model that is applicable to multiaxial states of stress and strain, not just specific uniaxial test (pg. 2861, 1st paragraph, last two lines).

Art Unit: 2121

Per claim 14 Ogden teaches

- a uni-axial loading condition (pg. 2869, last paragraph)

Per claim 15 Ogden teaches

- the stretch ratio is a ratio between deformed length divided by original length (as defined in pg. 10, paragraph 0049, lines 4 and 5: pg. 2876, equation 5.20) in one direction.

Per claim 16 Ogden teaches

- the stretch ratio is equal to strain of the rubber-like material minus 1 (pg. 2874, lines 5 and 6).

Per claim 17 Ogden teaches

- Claim 17. The method of claim 13, wherein the strain (pg. 2872, figure 2) has a range between -0.8 and 1.2 (design choice)

Per claims 18, 22, 25 Ogden teaches

- (a) calculating a function value by multiplying an initial stretch ratio with the associated stress value at lambda minus 1 (as defined in pg. 10, paragraph 0049, lines 4 and 5: pg. 2876, equation 5.20)
- (b) initializing (initiate the software, pg 2870, paragraph above equation 3.26) an old stretch ratio old with the initial stretch ratio (initiate the software, pg 2870,

paragraph above equation 3.26; pg. 2873); (c) calculating a new stretch ratio new as an inverse of square root ratio (pg. 2876, equation 5.2) of the old stretch ratio old; (d) when absolute value of is less than or equal to a predetermined threshold (pg. 2875, last paragraph, damage threshold), assigning the function value to a particular one of the stress function values (pg. 2864, last paragraph "Isotropy" section, lines 2-3) corresponding to the initial stretch ratio (pg. 2864, last paragraph "Isotropy" section, lines 2-3) (e) otherwise, adjusting the function value by adding another term, wherein another term (pg. 2876, equation 5.2, other term being λ^2) is calculated by multiplying the new stretch ratio new with the associated stress value at new -1 (pg. 2874, lines 5 and 6); assigning the new stretch ratio new to the old stretch ratio old (pg. 2874, lines 5 and 6); and repeating (c), (d) and (e), until (d) has been satisfied.

Per claim 19 Ogden teaches

- the predetermined threshold (pg. 2875, last paragraph, damage threshold) is 0.01 (design choice).

Per claim 24 Gallagher teaches

- an I/O interface (pg. 191, "Graphics Display Considerations" left side, 2nd paragraph; a communication interface; a secondary memory; a main memory for storing computer readable code for an application module; at least one processor coupled to the main memory, the secondary memory, the I/O interface, and the

communication interface, said at least one processor executing the computer readable code in the main memory to cause the application (to one of ordinary skill realizes these limitations as typical computer products to which computer aided design software runs on, pg. 185, left side "CR Categories", i.e. CAD, Computer graphics, etc.)

Section II: Response to Arguments

IDS

5. Applicants have not provided an IDS to the non-patent literature denoted within the disclosure. The objection set forth the previous office action has not been overcome by applicants.

103

6. Applicants' arguments, see pages 8-17, filed 11/29/2006, with respect to the rejection of claims 13-26 under 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Gallagher and Ogden.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mr. Tom Stevens whose telephone number is 571-272-3715, Monday-Friday (7:00 am- 4:30 pm EST).

Art Unit: 2121

If attempts to reach the examiner by telephone are unsuccessful, please contact examiner's supervisor Mr. Anthony Knight 571-272-3687. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Answers to questions regarding access to the Private PAIR system, contact the Electronic Business Center (EBC) (toll-free (866-217-9197)).
